

2025-2026

- Revenue Share and NIL are two different things
- Revenue Share at BC: around 3 million
- A school like UConn has advantage because it is a basketball school
- Not a lot of money for basketball
- Typically it is not known publicly how much each team has there are rumors
- It is also not known how much of there roster is NIL and how much is Revenue Share
- BUT last year it was estimated Kentucky spent 22 million dollars (the most money anyone spent on a team)
- Boston College allegedly about 3 million last year
- UConn spent 13-14 million last year on there team
- Market right now is up 65%
- General consensus is the market is inflated and people are getting paid way too much
- Point guard minimum is 500k
- People are paying for size because there is less quantity centers and power forwards
- The supply is smaller than the demand for centers
- Before you list the kid's name check Twitter to make sure the kid hasn't committed yet
- This year BC has around 6 million
- Top 25 players would be good for a school like UConn
- This list top 25 Boston College cannot afford
- Anyone in the top 100 of the Field of 68 list Boston College cannot afford
- You have to find guys that are low volume high major players or high volume low major players (diamonds in the rough)
- Find a mid player that averages mid to good numbers
- Look at Villanova's team last year (they did good with there roster because the players that transferred
- Duke Brennan (went from mid major school to high major school and his stats were better and is a win)
- Typically if you go from a mid major to a high major school expect production to be cut by around 50% so if a player stays around the same or does better in a better conference it's good
- Find out players worth by looking at the market (it is inflated right now like Juke Harris is worth 2.5-3 million not 1.2-2.0 million)
- Worry less about the value of the players and worry more
- In terms of rating in HDI we cannot afford players below 80 that are undervalued (but over 60)
- The current format of "First attempt of research for scouting analytics" and everything below it looks good so keep the format, metrics, thresholds, the same, its just we cannot afford any of the players on this list

Executive Summary

Priority	Player	Bucket	Why he fits	Main risk
1	Xander Pintelon	Frontcourt answer	Best size-plus-spacing value on the board; 6-11 with real 3-point volume	High foul rate; not a true offensive hub
2	Adrian Myers	Wing role player	Best wing-value fit; real shot volume, rebounding, and event-defense	Very poor non-rim-2 efficiency; not a primary creator
3	Dorin Buca	Frontcourt answer	True 7-2 size in an inflated size market	Turnovers, free throws, and foul risk
4	Micah Tucker	Guard role player	Best real creator among the guards; functional ball-handling and setup	Scoring efficiency is uneven; should not be priced like a premium PG
5	Luke Almodovar	Guard role player	High-volume scoring guard with real rim and FT pressure	32% from 3 on huge volume; very low assist rate
6	Ben Roseborough	Guard role player	Best pure shotmaking efficiency of the guards	Weakest defensive floor; smaller sample
7	Devon Pryor	Developmental flyer	Connector traits and low mistakes	Too little offensive load to bank on immediate role value

Primary Evaluation Table

Player	Bucket	Role	Size	Height	Usage	Shooting volume / efficiency	Creation / security	Rebounding / defense	Best Use
--------	--------	------	------	--------	-------	------------------------------	---------------------	----------------------	----------

Xander Pintelon	Frontcourt answer	Stretch forward / spacing big	6-11	67	19%	37/105 from 3 (35%), 30/61 from 2 (49%), 35/41 FT (85%)	0.7 APG, 0.8 TO; low assist rate, average turnover rate	16% DRR, 6% ORR, average steal rate, above-average block rate, high foul rate	Stretch 4/5 depth piece who gives BC size and floor spacing
Adrian Myers	Wing role player	Active rebounding versatile wing	6-6	74	23%	48/129 from 3 (37%), 63/130 from 2 (48%), 40/55 FT (73%)	1.0 APG, 1.0 TO; low assist rate, low adjusted TO rate	12% DRR, 7% ORR, above-average steal rate, above-average block rate, average foul rate	Add-on wing who gives BC real shot volume, rebounding, and defensive events
Dorin Buca	Frontcourt answer	Center	7-2	66	19%	2/11 from 3 (18%), 32/56 from 2 (57%), 16/30 FT (53%)	0.5 APG, 1.1 TO; low assist rate, extremely high adjusted TO rate	15% DRR, 13% ORR, poor steal rate, elite block rate, high foul rate	Cheap size swing as a depth 5 / rim-protection bet

Micah Tucker	Guard role player	Active point guard	6-2	68	27%	38/117 from 3 (32%), 96/198 from 2 (48%), 113/139 FT (81%)	3.0 APG, 1.9 TO; very high assist rate, average turnover rate; best pure playmaking guard in this cut	5% DRR, 2% ORR, average steal rate, below-average block rate, very low foul rate	Guard role player who gives secondary creation and ball-handling, but should not be priced like a premium point guard
Luke Almodovar	Guard role player	Active perimeter-leaning scoring wing	6-3	68	27%	66/209 from 3 (32%), 87/152 from 2 (57%), 92/121 FT (76%)	0.7 APG, 1.0 TO; very low assist rate, very low turnover rate; scorer first, not organizer	14% DRR, 2% ORR, above-average steal rate, below-average block rate, low foul rate	Guard role player who adds perimeter scoring volume without needing point-guard reps
Ben Roseborough	Guard role player	Scoring combo guard	6-4	67	24%	23/56 from 3 (41%), 20/53 from 2 (38%), 23/28 FT (82%)	1.1 APG, 0.8 TO; low assist rate, very low turnover	6% DRR, 1% ORR, average steal rate, below-average	Add-on shooting guard if BC wants perimeter volume right away

							r rate; shotma ker, not organiz er	block rate, high foul rate	
Devon Pryor	Developm ental flyer	Low-us age wing	6-7	67	13%	4/18 from 3 (22%), 13/22 from 2 (59%), 9/19 FT (47%)	1.2 APG, 0.6 TO; high assist rate, low turnove r rate, but very low load	9% DRR, 7% ORR, average steal rate, average block rate, high foul rate	Low-usa ge connecto r wing/for ward if the price is low

Bucket Views

Frontcourt Answers

Player	Verdict	Why
Xander Pintelon	Best frontcourt fit	Cleanest size-plus-spacing profile in the group. That matters most for BC.
Dorin Buca	True center fallback	Better pure 5 size than Xander, but much worse offensive skill and more turnover/foul risk.

Wing Role Player

Player	Verdict	Why
Adrian Myers	Best wing role player	Real 3-point volume, solid size, rebounding, and defensive-event value. Helps a roster without needing primary creation touches.

Guard Role Players

Player	Verdict	Why
Micah Tucker	Best creator guard	Best actual playmaking profile in the group. Useful if BC needs functional setup and secondary ball-handling.
Luke Almodovar	Best scoring-volume guard	High-usage scoring guard with real rim and FT pressure. Better scorer than organizer.

Ben Roseborough	Best shooting specialist	Best pure shotmaking efficiency, but weaker defensive floor and smaller sample.
------------------------	--------------------------	---

Developmental Flyer

Player	Verdict	Why
Devon Pryor	Developmental flyer only	Connector traits are useful, but the offensive load is too low to treat him as a bankable immediate role piece.

Comparative Tables

Pure Shooting Value (PSV)

Player	3PA	3P%	Interpretation
Ben Roseborough	56	41%	Best pure shotmaking efficiency, but small sample.
Adrian Myers	129	37%	Best blend of trustworthy wing volume and playable size.
Xander Pintelon	105	35%	Most important positional shooting value because he is 6-11.
Luke Almodovar	209	32%	Real perimeter volume, but efficiency is only average.
Micah Tucker	117	32%	More useful for ball-handling than for pure shooting gravity.
Devon Pryor	18	22%	Not enough volume or accuracy.
Dorin Buca	11	18%	Not a spacing case.

Creation vs. Finishing

Player	Interpretation
Micah Tucker	Best pure creator of the guard group. The assist profile is real, even if the scoring efficiency is uneven.
Adrian Myers	Best scorer/wing-offense blend here. Not a lead creator, but can create enough to matter.
Ben Roseborough	Better jump-shot creator than passer. Scorer first.
Luke Almodovar	Scoring guard first. Very low assist rate keeps him in the scorer bucket, not the organizer bucket.
Devon Pryor	Best connector signal from assist/turnover control, but on very low load.

Xander Pintelon	Finisher/spacer big. Not a table-setter.
Dorin Buca	Pure play-finisher. Turnover profile is the problem.

Defensive Floor

Player	Interpretation
Adrian Myers	Best overall defensive floor. Wing rebounding plus steal/block event profile is the cleanest two-way signal.
Dorin Buca	Best interior utility because of size, OREB, and elite block rate. Foul rate is the risk.
Xander Pintelon	Solid size floor with defensive rebounding and some block value, but not the same rim deterrence as Buca.
Luke Almodovar	Better defensive floor than the scoring-guard label suggests because the steal rate is above average and the foul rate is low.
Micah Tucker	Very low foul rate helps, but weak rebounding and limited size events keep the defensive floor modest.
Devon Pryor	Connector-only defensive value.
Ben Roseborough	Weakest defensive floor of the group.

Derived Indicators

Player	3PA/G	FTA/G	3PA share of FGA	Approx. TS%	Interpretation
Xander Pintelon	3.2	1.2	63%	56.0%	Stretch-big profile. Useful spacing at size, not a high-usage scorer.
Adrian Myers	4.6	2.0	50%	54.7%	Real wing-spacing profile with enough volume to matter.
Dorin Buca	0.4	1.1	16%	53.6%	Traditional size profile. Almost no spacing value.
Ben Roseborough	5.1	2.5	51%	54.4%	True perimeter shotmaker with more shot-creation than playmaking.
Devon Pryor	1.1	1.2	45%	48.6%	Low-usage connector line, not real scoring pressure.

Luke Almodovar	6.3	3.7	58%	56.0%	High-volume scoring guard profile; real shot load, low-mistake play, limited playmaking.
Micah Tucker	3.8	4.5	37%	55.7%	Functional guard scoring line with real foul-drawing and real passing, but only moderate shooting efficiency.

Shot Diet

Player	Shot profile	Interpretation
Xander Pintelon	Primarily catch-and-shoot 3-point scorer, below-average rim efficiency, very low non-rim 2 volume	Best used as a spacing big, not as a scoring hub.
Adrian Myers	Balanced wing diet; good 3-point volume, decent rim efficiency, very poor non-rim 2 efficiency	Best used as a role wing who spaces, attacks closeouts, and rebounds.
Dorin Buca	Heavy rim profile, almost no 3-point volume, almost no non-rim 2 profile	Pure center bet. Screen, dive, rebound, protect the rim.
Ben Roseborough	Perimeter-heavy, many made 3s off the dribble, poor rim efficiency, high non-rim 2 volume	Best used to stretch the floor and hunt jumpers, not to live at the rim.
Devon Pryor	Very low-volume scorer across the board	Connector only. Offense has to be built around others.
Luke Almodovar	High-rim, very-high-3pt-volume scoring profile; mix of catch-and-shoot and pull-up 3s; non-rim-2 efficiency is poor	Best used as a perimeter scoring add, not as a primary organizer.
Micah Tucker	High-rim, average-3pt-volume, high-non-rim-2 guard diet; creates most of his own 2s; assists primarily away from the rim	Best used as a secondary creator who can handle and organize some offense, but not as an expensive lead-guard bet.

Rankings

Rank	Player	Why
1	Xander Pintelon	Best specific frontcourt value in this cut because size plus spacing is the hardest thing to buy.

2	Adrian Myers	Best wing-value play. Real volume, rebounding, and defensive events.
3	Dorin Buca	True size still matters in this market, even with clear offensive risk.
4	Micah Tucker	Best real creator among the guard role players. More useful if BC needs functional ball-handling and setup.
5	Luke Almodovar	Cleaner scoring add than Micah, but less actual guard function.
6	Ben Roseborough	Strong shotmaker, but weaker defensive floor and smaller sample.
7	Devon Pryor	Connector traits only. Too little offensive pressure to move higher.
